Digital Literacy Project Report

Name: YUG KARTIK YADAV

Registration Number: 25BCE11199

Branch: B.Tech CSE

Year: 1st Year

Course Code: CSE0001

Course Title: Digital Literacy

Date: 30 March 2026

Introduction

This project was assigned as part of the Digital Literacy course to help students understand and apply essential digital skills in real-world scenarios. As a Student Digital Ambassador, my role was to explore different aspects of digital literacy, including professional online presence, safe communication, and awareness of cyber threats. The project involved completing five tasks, each aligned with a course module, and organizing the work in a structured GitHub repository.

Through this project, I learned how to create digital content, build a professional portfolio, use online collaboration tools, communicate formally through emails, and understand cybercrime risks. These skills are essential not only for academic success but also for future career growth. This project helped me gain practical experience and improved my confidence in navigating the digital world responsibly.

Task 1: Digital Literacy Awareness Infographic

For this task, I created an infographic using Canva, a free online design tool. Canva was easy to use and provided many templates, icons, and design elements that helped me create a clean and visually appealing infographic. My design focused on three main topics: what digital literacy is, safe internet practices, and professional online presence.

The infographic explained digital literacy as the ability to use digital tools effectively and responsibly. It also highlighted safe practices such as avoiding suspicious links, using strong

passwords, and protecting personal data. Additionally, I included tips on maintaining a professional online presence, such as keeping profiles clean and sharing useful content.

One challenge I faced was selecting the right amount of information without making the design look cluttered. It was interesting to learn how visual design plays an important role in communication. This task helped me understand how to simplify complex ideas and present them in an engaging way.

Task 2: Student Digital Portfolio

In this task, I created and updated my profiles on GitHub, LinkedIn, and Kaggle. Each platform serves a different purpose. GitHub is used to showcase coding projects and technical work, LinkedIn is used for professional networking and career opportunities, and Kaggle is useful for learning data science and participating in competitions.

On GitHub, I created a profile README that includes my name, branch, and learning goals. On LinkedIn, I completed my education details, including my degree and university. These steps helped me build a basic but professional online identity.

Over the next four years, I plan to regularly update these platforms. I will upload my projects on GitHub, connect with professionals on LinkedIn, and improve my technical skills through Kaggle. This will help me build a strong portfolio for internships and job opportunities.

This task made me realize the importance of starting early and maintaining a consistent online presence.

Task 3: Coding & Collaboration Platforms

For this task, I used HackerRank for coding practice and Google Forms for collaboration. On HackerRank, I completed a beginner-level problem, which helped me understand the basics of problem-solving and coding logic. It was a good starting point for improving my programming skills.

In the second part, I created a Google Form titled "Digital Literacy Awareness Quiz" with five questions. The form included multiple-choice and short-answer questions. I also viewed the responses in Google Sheets, which showed how data can be collected and analyzed easily.

These tools are very useful academically. Coding platforms like HackerRank help in improving logical thinking and preparing for placements. Google Forms is useful for surveys, quizzes, and collecting feedback efficiently.

This task helped me understand how technology can be used for both learning and collaboration. It also improved my confidence in using online tools effectively.

Task 4: Email Etiquette & Communication

One common situation where poor digital communication causes problems is when students send informal or unclear emails to professors. For example, sending an email without a subject line, greeting, or proper explanation can lead to confusion or being ignored.

In such cases, the student should use a clear subject line, proper greeting (like “Dear Professor”), and a well-structured message explaining the request. A polite tone and proper sign-off are also important.

Through this task, I learned that professional communication reflects a person’s attitude and seriousness. Even a simple email can create a strong impression if written properly. This skill is very important for academic and professional life.

Task 5: Cybercrime Awareness

While researching cybercrime, I was surprised by how common UPI fraud and phishing scams have become, especially among students. Many people fall victim simply because they are unaware of basic safety practices.

One important habit I will change is being more cautious while clicking on links or sharing personal information online. I will also make sure to verify payment requests before approving them.

This task made me realize that awareness is the best defense against cybercrime. Even small precautions can prevent major financial and personal losses. As a Digital Ambassador, it is important to spread this awareness among peers.

Conclusion

Overall, this project was very useful in improving my digital skills and awareness. I learned how to create content, build a professional online presence, use collaboration tools, communicate effectively, and stay safe online. Each task provided practical knowledge that will help me in my academic journey and future career.
